**Technical meeting Notice:**

**HDPE Pipeline liner installation.**

**Date:** Tuesday July 13, 2010  
**Time:** 6:00-9:00 pm  
**Location:** The Faculty Club: Saskatchewan Room, University of Alberta,  
11435 Saskatchewan Drive, Edmonton  
**Speaker:** John Fullmer BSc.  
President HEBNA CORPORATION

**Details:**

Pipeline owners are continuously faced with challenges in preventing corrosion or abrasion to prevent pipelines leaks from occurring. An often used and practical solution to these problems is installing a compressed fit HDPE liner inside both new and older pipelines.

During John's presentation the following topics will be discussed:

- How is a compressed fit liner installed?
- What services can a HDPE liner be used?
- What are the limitations?
- What are the allowable operating pressures?

To manage help manage risk, and control costs a dual containment pipeline with a HDPE liner may be the most cost effective solution available. Savings can be achieved through increased flow capacity and the elimination of corrosion inhibitors. Cost savings are also achieved in rehabilitation of older pipelines vs. a dig and replace solutions. Find out the parameters and what all is involved in getting a HDPE liner installed.
